Good morning Andy,

Attached is a short summary of the activities undertaken by DuPont and Chemours in the vicinity of the Washington Works facility. Since sampling is ongoing, and new wells are continually being evaluated, the numbers are increasing. I also provided maps depicting sampling locations for both PFOA and HFPO-DA (GenX). Since some of this information may be considered confidential, please do not distribute outside the Agency. Please let me know if there is anything else you need at this time. Thanks.

Rick and Roger,

I'm finally getting back to responding to the internal comments on the Galloway et al. GenX in the Parkersburg area paper.

Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)

As we've discussed, these reports are not well publicized, and I don't really know where to access them.

I'd be very happy to include this information in the paper and I'm wondering if you could point me to a referenceable source that I can use to summarize all the work that has been accomplished so far. Or even better, would either of you be able to provide a terse referenced statement that covers the main points that you think need to be included? A short paragraph that describes the scope of the ongoing efforts to locate PFOA and HFPO-DA contamination of drinking water sources and possibly a statement on effectiveness of the treatment systems that have been installed would be helpful.

We should acknowledge and recount the progress that has been made in these communities.

Thank you very much,

Andy
